

## IMAGE CAPTURE AND IDENTIFICATION SYSTEM AND PROCESS

### Abstract

An identification method and process for objects from  
digitally captured images thereof that uses image characteristics  
to identify an object from a plurality of objects in a database.  
The image is broken down into parameters such as a Shape  
Comparison, Grayscale Comparison, Wavelet Comparison, and Color  
Cube Comparison with object data in one or more databases to  
identify the actual object of a digital image.
